

Orthodontic Product Catalog

Creating success for patients and your practice.

The orthodontic business and treatment models are changing. Patients have more choices than ever, and they're playing an active role when it comes to their treatment plans. At the same time, emerging technology is driving innovation and new efficiencies in the practice of orthodontics.

In the midst of this change, your goal remains the same—creating beautiful, confident smiles that will last your patients a lifetime.

Clarity™ Aligners with Clarity™ Precision Grip Attachments

CLARITY™

Go work wonders.

Clarity digital solutions provide flexibility and efficiency so you can achieve the best outcomes for your patients and your practice. Discover how Clarity can help you work wonders.

Four important reasons to add Clarity Aligners to your existing treatment options.

Force persistence

Stain resistance

Torque control

**Straight trimline
for patient comfort**

Clarity™ Aligners with Clarity™ Precision Grip Attachments

Clarity™ Precision Grip Attachments

Pre-loaded, 3D-printed, fully cured composite attachments that are optimally shaped, and customized to fit each patients' unique anatomy. Designed to increase predictability of your attachment bonding process, this revolutionary technology will change the way you work, for good.

See the difference:

Conventional attachments

- Unpredictable shapes
- Variability
- Imprecision
- Time intensive
- Excess composite
- Technique sensitive
- Unreliable aligner engagement

Clarity Precision Grip Attachments

- ✓ Precisely customizable
- ✓ No excess composite
- ✓ Simplified process
- ✓ Reliably durable
- ✓ Beautiful esthetics
- ✓ Easier debonding
- ✓ Predictable aligner engagement

Precise

Pre-filled attachments offer better tracking* when compared to conventional attachments

Flash-less

No flash to clear away, cutting down on appointment time and unwanted tooth movement

Simplified

Pre-loaded attachments eliminate technique sensitivity and reduce onboarding time for new staff

*Solventum data on file

Clarity™ Digital Bonding

You plan the strategy. We provide the tools to make it work. Solution features:

Made of two layers: soft gel inlay to conform to the patient's anatomy and hard outer shell to add rigidity and support placement of the tray.

Removable outer layer is designed to facilitate bracket insertion and tray removal after bonding.

Clear appearance

Blue midline marker to assist with tray alignment when seating

Meets FDA requirements for biocompatibility*

High degree of bracket placement accuracy

Compatible with:

**SmartClip™ SL3
Self-Ligating Brackets**
Refer to Section 2

**Clarity™ Advanced
Ceramic Brackets**
Refer to Section 3

**Victory Series™
Low Profile Brackets**
Refer to Section 4

**Victory Series™ Superior
Fit Buccal Tubes**
Refer to Section 4 and 5

Streamlined, shorter bonding appointments*

Save up to
26
minutes
of team time per
bonding appointment*

Reduce up to
19
minutes
of doctor time per
bonding appointment*

Reduce
up to
1.2
repositioning
appointments per case*

Save up to
6
months
of
treatment time

Digital flash-free bonding

Our APC™ Flash-Free Adhesive Coated Appliance System has a resin-soaked nonwoven mat that adheres to the enamel eliminating the process of flash removal.

Traditional paste adhesive require detailed flash cleanup or even grinding, if already cured.

*Solventum data on file

Clarity™ Retainers

Keep your smile straight: Clarity™ Retainers are clear and nearly invisible

The straight trimline makes them, more comfortable and more esthetic, and the material resists scratching and staining.

Highly durable

Easy to insert and remove

Fit well

Comfortable upon
initial seating

Custom fit to you

Clarity Retainers are:

- ✓ Gluten free
- ✓ BPA free
- ✓ Natural rubber latex free
- ✓ Mercury free
- ✓ Phthalates free

Clarity™ Portal

Choice. Efficiency. Control.

Clarity Portal offers cloud-based accessibility to aligner, bracket and dental restorative treatments with a simple process and intuitive platform.

The features you want, without the hassle

- Cloud-based software provides convenient access to Tx Design
- Accepts any high quality STL file
- Seamless workflow for Clarity™ Aligners, Clarity™ Digital Bonding, Filtek™ Matrix and combination Tx Designs

Time saving features

- Movement grid
- Access to full history of patient records
- Patient and case notes
- Virtual roots with accurate lengths
- Ability to combine treatment types (hybrid treatment)
- Downloadable STL files

Plan every move for aligners, brackets and restorative treatment, all in one place

Filtek™ Matrix

Together with Filtek™ Matrix

Clarity Aligners and Filtek Matrix — available together on Clarity Portal — to expand and differentiate your practice.

Filtek Matrix is a digitally designed anterior matrix that helps simplify restorative procedures for you and your patients.

Predictable outcomes:

increased confidence with results aligned to digital design

Esthetic results:

durable composite restorations aligned to planned dentition shape

Conservative treatment:

preserve healthy tooth structure

Efficient procedure:

helps save time and effort compared to the free-hand technique

SmartClip™ SL3 Self-Ligating Appliance System**2.2**

Victory Series™ Active Self-Ligating Brackets.....**2.6**

Clarity™ Ultra Self-Ligating Brackets**2.8**

2.2 Self-Ligating Appliances

SmartClip™ SL3 Self-Ligating Appliance System

Refer to Section 1
Clarity™ Digital Bonding

Design

Smooth radius surface for enhanced patient comfort
Notched tie-wings for additional bicuspid identification Low profile self-ligating bracket
Torque-in-base for level slot line up and improved finishing

Familiar bracket

Twin shape bracket with rhomboidal design
Color-coded quadrant ID system

Alignment

Vertical scribe line for more accurate bracket placement

Intelligent SL3 clip

Enhanced for easy wire engagement and disengagement
Pre-programmed “release” of the archwire Open, clean design for patient hygiene
Precisely finished nickel - titanium

Bonding

Optional APC™ Adhesive Coated Appliance System
Micro-etched 3-point contact base surface for anatomical contouring

Available molar brackets for a complete 6 x 6 system

The SmartClip™ Self-Ligating Appliance System revolutionizes self-ligation. An integral nickel-titanium clip permits easy and simple archwire insertion and removal, yet holds the archwire with a pre-programmed force that avoids unintentional disengagement. The SmartClip™ Bracket also features a familiar twin-bracket design and is available in several prescriptions. Choose either the APC™ II Adhesive Coated Appliance System, the APC™ PLUS Adhesive Coated Appliance System with color change adhesive, or the APC™ Flash-Free Adhesive Coated Appliance System for enhanced bonding efficiency. These features, exclusively together in the SmartClip Appliance System, combine to bring greater efficiencies and more predictable outcomes to orthodontic treatment.

SmartClip™ SL3 Brackets available with:

APC™ Flash-Free Adhesive
Also available with APC™ II and APC™ Plus Adhesive pre-coating.

2.6 Self-Ligating Appliances

Victory Series™ Active Self-Ligating Brackets

Victory Series Brackets are widely accepted as an industry benchmark for outstanding performance. Advanced Victory Series™ Active Self-Ligating Brackets have been designed and detailed to be no exception. Quality manufactured to strict tolerances and extensively tested to assure reliability, Victory Series Active Self-Ligating Brackets will help you effectively treat even the most difficult cases with confidence.

The Victory Series Active Self-Ligating Bracket has a robust ligating mechanism that is designed for reliability in use and ease of operation. And the full slot-width size door maximizes available rotational control capability. You can also add optional APC™ II Adhesive coating for reduced bonding steps and added convenience.

Accurate bracket placement and positioning

Parallel mesial-distal sides and vertical scribe line provide visual references^{7,8}

Torque-in-base allows for level slot line-up⁹

Design advantages for treatment flexibility

Rounded slot edges designed to reduce archwire binding¹⁰

Ample under tie-wing area for use of elastic chains and other ligated auxiliaries¹¹

Compatible with other active self-ligating bracket archwire sequences¹²

Enhanced patient comfort

Precision MM bracket body with rounded edges¹

Round, low profile hooks²

Easy to open & close door

Doors can be opened using either the U-notch or the gingival tab³

Vertical groove under the door allows for easy opening from the U-notch⁴

Reliable Self-Ligating Door Mechanism¹⁴

Heat-treated Nickel-Cobalt alloy door for secure and robust ligation (shown transparent)⁵

Full slot-width door for optimal rotational control⁶

Intricate base for greater bond strength

Micro-etched, 80-gauge mesh pad applied at a 45° angle¹³

Anatomically contoured base surface¹³

Optional APC™ Adhesive Coated Appliance System

Victory Series™ Active Brackets available with:

APC™ II Adhesive

Adding Prefix "3" is APC™ II Adhesive System – Example: 3025-127

Active Bracket Design means Dynamic Performance.

Victory Series Active Self-Ligating Brackets offer dynamic interaction between the ligating mechanism and the archwire as treatment phases change, with performance advantages in each phase.

Passive Phase	Interactive Phase	Active Phase
 Round archwires in .022 slot With round archwires, the bracket is passive, resulting in minimal archwire contact and low friction for efficient leveling and alignment.	 Sizes below .016 x .025 in .022 slot Small square or rectangular archwires fill the slot but do not reach the ligating mechanism. This adds control during the working phase for space closure, rotation control and arch form expression.	 Sizes starting at .016 x .025 in .022 slot Larger rectangular archwires engage the ligating mechanism, offering full control for finishing and detailing.

*Solventum version of this prescription. No endorsement by the Doctor is implied.

2.8 Self-Ligating Appliances

Clarity™ Ultra Self-Ligating Brackets

Showcase your expertise. Deliver precise results.

Clarity™ Ultra Self-Ligating Brackets offer rotational control, improved versatility and Solventum's unique stress concentrator designed for predictable, consistent debonding.

Solventum's proprietary oval under tie-wing area permits double ligation for treatment versatility.

Passive self-ligating bracket becomes active on-demand with addition of metal or elastomeric ligatures.

Translucent, stain-resistant ceramic for brilliant esthetics. No metal parts show.

A wide ceramic door assists rotational control with a broad mesial-distal span.

Injection-molded ceramic provides smooth, rounded surfaces and corners designed for patient comfort.

Made of fine-grained alumina, designed for strength.

Product Benefits:

- Available with APC™ Flash-Free Adhesive precoating
- No metal parts showing
- Door as wide as bracket
- An audible click is heard when the door opens and closes
- Reliable, self-ligating doors withstand more than 2x the open- and closing-cycles of typical treatment
- MBT™ Versatile+ Appliance System prescription
- Fine-grained alumina ceramic provides excellent translucency

3.2 Ceramic Brackets

Clarity™ Advanced Ceramic Brackets

**Attractive appearance.
Distinct design.**

Predictable, consistent debonding with proprietary stress concentrator.

Reduce the uncertainty of the ceramic bracket debonding process with our unique stress concentrator, a hallmark of the Clarity brand. This innovative design feature allows for mesial-distal debonding with a simple squeeze, so you can debond with confidence and help ensure the patients' debonding visit will be a positive part of the treatment experience.

Enhanced patient comfort.

Small, low profile bracket with smooth bracket surface and rounded corners enhance patient comfort.

Clarity™ Advanced Ceramic Brackets

Advanced ceramics. Enhanced beauty.

Clarity Advanced Ceramic Brackets are a revolutionary leap forward in orthodontic ceramic brackets. Through the combination of progressive technology and state-of-the-art design, Clarity Advanced Ceramic Brackets deliver brilliant esthetics, small design, predictable debonding and enhanced patient comfort. These advanced features enable you to offer the ultimate combination of esthetics and performance to your patients.

Product Benefits:

- Brilliant esthetics
- Trusted strength and small bracket design
- Predictable, consistent debonding with proprietary stress concentrator
- Enhanced patient comfort

APC™ Adhesive Efficiency

Clarity Advanced Ceramic Brackets are available with your choice of APC™ Adhesive coating, including APC™ Flash-Free Adhesive.

Benefits of APC™ Flash-Free Adhesive:

- Eliminates the flash removal step
- Saves bonding time for doctor, staff and patients
- Lowers the bond failure rate
- Makes debonding and remnant clean-up easier
- Improves patient bonding/debonding experience

Clarity Advanced Brackets available precoated with:

APC™ Flash-Free Adhesive

Also available with APC™ II and APC™ Plus Adhesive pre-coating.

Clarity™ Ultra Self-Ligating Brackets

Showcase your expertise. Deliver precise results.

Clarity™ Ultra Self-Ligating Brackets offer rotational control, improved versatility and Solventum's unique stress concentrator designed for predictable, consistent debonding.

Product Benefits:

- Available with APC™ Flash-Free Adhesive precoating
- No metal parts showing
- Door as wide as bracket
- An audible click is heard when the door opens and closes
- Reliable, self-ligating doors withstand more than 2x the open- and closing-cycles of typical treatment
- MBT™ Versatile+ Appliance System prescription
- Fine-grained alumina ceramic provides excellent translucency

Victory Series™ Low Profile Brackets

MBT™ Versatile+ Appliance System

Fast, for you. Strong for them.

Victory Series Low Profile Brackets also offer the unequalled efficiency of revolutionary APC™ Flash-Free Adhesive. That means less chair time, less than 2% bracket bond failure rate in the first ninety days of bonding, and a better overall bonding experience for your patient.

Victory Series Low Profile Brackets

- True low profile metal bracket
- Uncompromising in ligation and control compared to full-sized brackets
- Reduced occlusal interference
- Contoured micro-etched base
- Ample under tie-wing area for easy ligation and double ligation

Victory Series™ Low Profile Brackets available with:

APC™ Flash-Free Adhesive

Also available with APC™ II and APC™ Plus Adhesive pre-coating.

MBT™ Versatile+ Appliance System

Victory Series Low Profile Bracket

The mesial-distal dimension is not compromised even though the bracket has a low profile. You maintain the rotational control you need to get the results you desire. Your patients will appreciate the comfort.

Micro-Etch 80 Gauge Mesh Base

A unique rhomboid design with a flatter, compounded radius accommodates naturally occurring variation in tooth surfaces. This design assures three-point contact for increased tooth adaptation. Positioning is made easier and more accurate because their shape follows the natural vertical line of the tooth.

4.6 Metal Brackets

Mini Uni-Twin™ Brackets

The low profile hook and small ball are milled from a single piece of metal for increased patient comfort.

The Mini Uni-Twin Bracket features a mesh base in addition to innovative design features that put you in control right from the start of treatment.

Combining the inter-bracket distance of a single width appliance with the rotational control of a twin bracket, it's designed for optimal orthodontic results. The innovative mesh bonding base is designed to match the curvature of the tooth for maximum contact and strong, consistent bonding.

For added convenience, you can select the Mini Uni-Twin Bracket with APC™ II or APC™ PLUS Adhesive Coating System.

The Mini Uni-Twin bracket improves tooth movement in the early stages of treatment and tooth control throughout the course of therapy.

The Mini Uni-Twin bracket delivers an unbeatable combination of superior function and superb bonding that you'll want to put into your practice right away.

Mini Uni-Twin™ Brackets available with:

APC™ II Adhesive

Also available with APC™ Plus Adhesive pre-coating.

4.22 Metal Brackets

Victory Series™ Brackets

The low profile hook and small ball are milled from a single piece of metal for increased patient comfort.

Solventum offers an innovative color coding system that assigns a different color to each quadrant of the mouth for immediate identification.

Gingivally Off-Set Bicuspid Bracket features a three point contact design along with rounded corners for a great base-to-tooth fit.

Victory Series™ Bracket System

The industry standard for brackets, the Victory Series metal bracket system features high bond strength, easily readable identification system and easier bracket ligation. For ease of use, the brackets have been designed with smoothly finished bicuspid tie-wings that are slightly extended and offset gingivally away from the tooth. Deep tie-wing undercuts assure easier and more secure ligation.

An innovative pad design, incorporating an 80 gauge mesh bonding pad, matches the curvature of the tooth for maximum contact and strong, consistent bond strength. Research conducted and published by Howard University* reveals shear bond strengths 40% to 50% higher for 80 gauge mesh vs. 100 gauge mesh on bicuspids with macro-filled resins.

Also available are gingivally offset bicuspid brackets. This unique

pad design features a larger bonding base and radiused corners for enhanced base-to-tooth adaptation, providing improved bond strength.

The Victory Series bracket system also makes use of torque-in-base design techniques to provide level slot line-up, and help avoid occlusal interference. A long axis scribe line is provided for accurate placement.

Victory Series metal brackets from Solventum. Providing products that make your life easier.

Victory Series™ Brackets available with:

APC™ II Adhesive

Also available with APC™ Plus Adhesive pre-coating.

*S. Scott, E.M. Kudlick, and F.C. Eichmiller, thesis abstract 1992, Howard University College of Dentistry, Washington D.C.

4.40 Metal Brackets

Victory Series™ V-Slot Brackets

Full contoured mesh base provides precision placement and consistent bonds.

The low profile torque-in-base design achieves level slot line-up and easy bracket placement.

Chamfered .018 x .018 V-slot allows easy insertion and removal of various auxiliaries to aid tooth alignment.

Victory Series Vertical Slot brackets deliver all the advantages of Victory Series brackets, along with the added benefits of vertical slot mechanics.

Our Victory Series V-Slot system was designed with you and your patient in mind. Chamfered vertical slots allow for easy insertion and

removal of various auxiliaries. Optional bicuspid brackets with gingival offsets provide increased bond strength. The integral ball hooks on cuspids and bicuspid allow for simultaneous use of auxiliaries.

The low bracket profile with domed tie-wings provides greater patient

comfort with easy ligation and enhanced mini metal esthetics. As with all Victory Series bracket systems, our color coded quadrant identification and APC™ Adhesive Coating System makes bracket selection user-friendly for both you and your staff. Victory Series Vertical Slot brackets: Solventum Innovation working for you.

Victory Series™ V-Slot Brackets available with:

APC™ II Adhesive

Also available with APC™ Plus Adhesive pre-coating.

4.42 Metal Brackets

Miniature Twin Metal Brackets

A micro-etched base features strength comparable to mesh.

Ample under tie-wing area means smoother and more secure ligation.

Torque-in-base design with compound base contour.

Miniature Twin Brackets provide all the proven clinical characteristics of full size twin brackets, in a smaller size for greater comfort and improved esthetics. Manufactured from sturdy 17-4 stainless steel, metal injection molded Miniature

Twin brackets incorporate a micro-etched base for bond strength equivalent to mesh. Also featured are easy-to-read permanent I.D. marks plus new tie-wing ink marks. In addition, Miniature Twin brackets include a smooth, bi-directional hook

for superior elastic engagement. Backed by Solventum, the leader in orthodontic brackets and appliances for more than 70 years, Miniature Twin brackets promise outstanding performance for patients and practitioners alike.

Miniature Twin Metal Brackets available with:

APC™ II Adhesive

Also available with APC™ Plus Adhesive pre-coating.

4.46 Metal Brackets

Miniature Twin V-Slot Metal Brackets

Miniature Twin Vertical Slot Brackets have all the features you've come to expect in a twin bracket—and more. They're smaller, for greater comfort and improved esthetics.

And their metal injection molded, one-piece construction features a micro-etched base which provides bond strength comparable to mesh, and lower friction than machined brackets.

Also featured are easy-to-read, permanent I.D. marks plus new tie-wing ink marks.

A vertical scribe line facilitates more accurate placement, and the vertical slot adds treatment flexibility.

Vertical Slot (.020 x .020) accommodates a variety of auxiliaries, including a removable hook pin, which can be added when needed—or not, your choice. Miniature Twin Vertical Slot Brackets deliver outstanding performance for both patients and practitioners.

Removable Hook Pin

Removable hook pin auxiliary for elastics.

Victory Series™ Superior Fit Buccal Tubes

Refer to Section 1
Clarity™ Digital Bonding

Superior fit.
Outstanding comfort
Low profile tubes.

Victory Series Superior Fit Buccal Tubes available with:

APC™ Flash-Free Adhesive

Also available with APC™ II
Adhesive pre-coating.

MBT™ Versatile+ Appliance System

Victory Series™ Superior Fit Buccal Tubes

Designed with extensive user input, Victory Series Superior Fit Buccal Tubes take advantage of modern computer design tools to offer performance enhancements you can both see and feel when you place them.

Well thought-out features improve gripping, handling and visual cues during placement. A large compound-contour base results in improved ease of tube positioning. Inside, Victory Series Superior Fit Buccal Tubes feature an exclusive “contoured funnel” design for easy wire insertion, designed to eliminate sharp corners and edges that contribute to binding and notching of the archwire. A low profile flush-mount hook and sleek tapered body add to patient comfort, and available APC™ Adhesive pre-coating make Victory Series Superior Fit Buccal Tubes an ideal choice.

5.4 Buccal Tubes

Victory Series™ Buccal Tubes

Our compact, technically advanced Victory Series Buccal Tubes include a trouble-free integral convertible cap that converts easily and consistently, every time. All you have to do is lift and peel. This exclusive cap also offers solid, one piece construction, eliminating the possibility of braze or solder materials that can leave a residue in the archwire slot.

Victory Series Buccal Tubes are designed with funneled and radiused entries on both the headgear tube and archwire slot, resulting in easy archwire insertion. Smooth, patient-friendly hooks improve comfort for your patients. You'll also appreciate the strong construction, low-profile design and distal notch that secures tie backs. Increasing patient comfort and providing you with a well-designed, reliable and predictable orthodontic solution.

Victory Series™ Molar Bonding Bases

Now you can achieve a stronger, more consistent bond in every case with the Victory Series Molar Bonding Base. Look closely at its profile and you'll see a curved anatomical design for optimal tube-to-tooth fit and a buccal indent that naturally conforms to the surface of the molar, making it easier to correctly position the buccal tube in place.

The micro-etched 80 gauge mesh, along with the buccal indent and the correct anatomical fit, are designed for increased bond strength. The buccal indent assists in more accurate tube positioning; a key advantage that can eliminate time-consuming archwire adjustments. And with the Victory Series Molar Bonding base, you'll never have to worry about having to use tooth separators for band placement.

For added convenience, two different sizes accommodate a wide array of buccal attachments.

Victory Series Molar Bonding Bases available with:

APC™ II Adhesive

Also available with APC™ PLUS Adhesive pre-coating.

MBT™ Versatile+ Appliance System

Victory Series™ Narrow Contoured

First Molar Bands

Maxillary – Victory Series Narrow Contoured Molar Bands

- Permanent laser ID marking
- Straight interproximal walls for reduced separation
- Reduced gingival/occlusal dimensions for less occlusal and gingival interferences
- Micro-etched inner surface for increased retention
- Curved festooned occlusal interproximal
- Increased occlusal “edge” strength for reduced deformation

- Kits may be split left/right for angulated brackets
- Regular temper
- Permanent laser ID

Wide

Narrow

- Firm “wedge” fit for adaptability to widely varying bicuspid shapes
- Occlusal-gingival height of the narrow bands are .5 mm less than the wide bands
- Slight occlusal-gingival roll enhances cement retention

Note: Photos in this section may show laser ID or ink ID. Refer to product description for actual ID type.

Lingual Sheaths

Streamlined lingual sheaths feature a variety of horizontal styles and one vertical style with a two-point contact for ease of lingual archwire insertion and stability. All horizontal styles are available with or without mesial/distal hooks; with solid or slotted tube; with or without distal latching indent. All styles are narrow in the occlusal-gingival dimension and have mesial/distal welding flanges that are curved slightly for better adaptation to bands. Lingual sheaths not preassembled on bands are sold in minimum quantities of 10 each type.

6.18 Bands and Attachments

Lingual Attachments

Flat-Base Lingual Buttons

Mushroom head, highly polished to prevent tissue irritation, retain auxiliary attachment from any direction. Also useful as a seating and removing lug.

482-100 10/pk

Curved-Base Lingual Buttons

Same head as 482-100, but on a curved base that adapts more easily to bicuspid bands and molar bands.

482-120 10/pk

Clear Plastic Button

For direct bonding

224-800 10/pk

Curved Bondable Buttons

20400-02 10/pk

Combination Lingual Hook/Seating Lugs

Hold elastics securely from mesial, distal, or occlusal. Straight occlusal edge for band seating. Smooth edges to protect against tissue irritation. Strip scored for easy break-away. 100/pk

481-001 Short (for anteriors and bicuspid)

481-002 Long (for molars)

Raised Arm Lingual Cleats

Arms are curved to protect against tissue irritation. Accommodates up to three heavy elastics on one cleat.

100/pk

485-001 Long arms

485-002 Short arms

Low-Profile Lingual Cleats (Debnam)

100/pk

485-004 Low profile

485-005 Wide low profile

485-006 Small low profile

Lingual Ball Hooks

Shanks flattened at end to facilitate a secure attachment to bands and lingual bonding pads.

486-010 Straight, 10/pk

486-020 Offset, 10/pk

Molar Hooks

Easy to weld on bands and strong enough for heavy cross elastics. No sharp edges to irritate tissue or damage elastics.

480-001 10/pk

Bondable Lingual Cleat

709-050 10/pk

Seating Lugs

Please specify if other than standard lingual position.

Modular Band/Bond Kit Organizers

- Modular “snap together” kit organizers can be custom assembled to your specific needs
- Durable plastic containers enclose sliding kit drawers with clear plastic hinged covers to protect your inventory
- Color coded labels identify band types

RxWeld Service

Custom Services

Convenient prescription program for orthodontists who reorder Solventum seamless bands prewelded with Solventum attachments:

- Reduces reorder time and paperwork
- Eliminates order confusion and reduces potential prewelding errors

Reordering bands prewelded with correct attachments and precise angulation and positioning is a time-consuming task in any orthodontic practice.

Solventum offers a unique ordering service which greatly simplifies band reordering. Here's how it works:

Every orthodontist ordering prewelded bands from Solventum has a prescription on file, containing customized ordering instructions.

Reorders with instructions that deviate from the prescription file will be verified by phone before Solventum processes the order. Custom order forms and a copy of your prescription are available on request.

Standard Welding

Solventum attachments in standard positions (see standard positions chart for edgewise and light wire attachments) on Solventum seamless bands and bonding bases. No charge.

Custom Welding

Solventum attachments in non-standard positions (see angulation chart for details on custom angulation) on Solventum seamless bands and bonding bases. No charge.

Tack-welding only — Solventum attachments to Solventum seamless bands.

No charge.

Torqued Attachments

Standard Angulation Chart

Angulation direction is illustrated by chart. Chart is shown as if viewer is facing patient. Degree of angulation must be specified when ordering. Our special order form includes this chart to assist in ordering desired angulation.

Note: For some pre-adjusted appliances, the crown tip is different than standard edgewise appliances. Consult pre-adjusted appliances section of this catalog for prescribed crown tip and angulation degrees applicable to specific techniques.

(+) Angulation
Crowns tipped mesially; roots inclined distally.

(-) Angulation
Crowns tipped distally; roots inclined mesially.

Applicable to Standard Edgewise and Torqued Edgewise

(-) Torque Crowns - Lingual
(+) Torque Crowns - Labial

Brackets to G.P. Bicuspid

Mesial/Distal Positioning
Centered

Occlusal/Gingival Positioning
Mesial-horizontal center of the base of archwire slot is located on horizontal centerline of band.

Brackets to Proportioned Bicuspid

Mesial/Distal Positioning
Centered

Occlusal/Gingival Positioning
Slightly offset occlusally whereby occlusal edge of the tie-wing is located approximately .0075 in. (.2 mm) from the occlusal edge of the band.

6.22 Bands and Attachments

Light Wire Attachments

Standard Edgewise Welding Reference Light Wire Attachments

Brackets to Bicuspid

Mesial/Distal
Centered

Occlusal/Gingival
Underslot of bracket centered
on band.

Single Buccal Tube to Molars

Mesial/Distal
Mesial edge of buccal tube bisects
mesial cusp.

Occlusal/Gingival
Gingival edge of tube is .048 in.
(1.2 mm) from gingival edge of band.

Standard Edgewise Welding Reference

Brackets to Bicuspid

Mesial/Distal Positioning
Centered

Occlusal/Gingival Positioning
Centered

* For proportioned bicuspid
bands, bracket is slightly offset
occlusally whereby occlusal
edge of tie-wings are flush with
occlusal edge of band.

Single Buccal Tube to Molars

Mesial/Distal Positioning
Mesial edge of buccal tube bisects
mesial cusp.

Occlusal/Gingival Positioning
Center of slot is .075 in. (1.9 mm) from occlusal
edge of band.

Occlusal/Gingival
Centered with hook to occlusal
(hook opening toward gingival).

Combination Hook/Lug

Mesial/Distal
Centered

Occlusal/Gingival
Center of hook is centered
occlusal-lingually.

Buttons

Mesial/Distal Positioning
On all molars with buccal attachment:
button bisects mesial cusp. On G.P.
molars, without buccal attachment:
button is centered mesio-distally. Also
applies to upper 2nd molars with or
without buccal attachment.

Occlusal/Gingival Positioning
Welding flange is .020 in. (.51 mm)
from occlusal edge of band.

Hi-Profile Cleats

Mesial/Distal Positioning
On all molars with buccal attachments:
cleat bisects mesial cusp. On G.P.
molars, without buccal attachment:
button is centered mesio-distally.
Also applies to upper 2nd molars with
or without buccal attachment.

Occlusal/Gingival Positioning
Welding flange is .020 in. (.51 mm)
from occlusal edge of band.

Low-Profile Cleats

Mesial/Distal Positioning
Centered

Orthodontic Hand Instruments

Weingart Utility Pliers

Versatile pliers with serrated grip surfaces. Securely holds wire or auxiliary at any convenient working angle. Rounded surfaces for patient comfort.

900-700

How Utility Pliers

Matching serrated tips. Grip surfaces securely hold wire or auxiliary at any convenient working angle. Rounded beaks for patient comfort.

900-701

Three-Jaw Wire Bending Pliers

Consistent bends are assured with precision-aligned tips. The two-beak jaw is made of a one-piece construction.

900-705

Omega Loop Forming Pliers

Make uniform Omega loops in square and rectangular wires. One-piece tip construction with serrated concave beak. Three-tier tip has 1.7 mm, 2.1 mm, and 2.6 mm diameters.

900-707

Bird Beak Pliers

Round and pyramid beaks are tapered to a fine tip for precise bends.

900-709

Tweed Loop Forming Pliers

Facilitates the making of Omega, "Bull" and closing loops. Tapered round tip opposite concave beak.

900-720

Arch Bending Pliers

Provides efficient handling, bending, and torquing of square and rectangular wires.

900-721

Orthodontic Hand Instruments

Weingart Utility Pliers

“Sure-grip” precision-matched serrated pads. Outer surface of beaks are carefully rounded for safety and comfort to lips and intraoral tissue.

900-735 Slimnose Weingart Utility Pliers, smaller tips for better intraoral accessibility.

See **801-700** Weingart Utility Pliers

How Utility Offset Pliers

(Offset/Regular Tip)
Similar to the 900-701 plier, except tips are offset at 45° angle to facilitate posterior intraoral applications.

900-702 

See **801-701** How Utility Pliers

Tweed Rectangular Arch-Forming Pliers

For rectangular and square wires. Gripping surfaces are precision machined to hold wire at right angle without slipping. Blades are .070 in. (1.78 mm). **Maximum wire size .021 x .025 in.**

900-703 

Lingual Lock-Forming Pliers

Forms terminal double-back bends in either .030 in. or .036 in. maximum lingual arches.

900-706 

Jarabak Pliers

For precise bending of lighter wires. Precision-aligned grooves with serrated tips in both beaks assure accurate bending of closing loops. **Maximum wire size .016 in. diameter.**

900-704 

Light Wire Bird Beak Pliers

Beaks are gradually tapered to bend small diameter loops. **Maximum wire size .016 in. diameter.**

900-710 

See **801-709** Bird Beak Pliers

Band Seating Pliers

Square, tapered, serrated tips grip prewelded bracket wings securely while fitting bands.

900-711 

Hollow Chop Pliers

Convex/concave beaks are .300 in. (7.61 mm) wide. Ideal for reshaping and contouring Nitinol wire and arches. **Maximum wire size .021 x .025 in. & .020 in. diameter.**

900-716

7.4 Hand Instruments

Cutters

Universal Cutter

(Safety Hold)

Holds loose distal ends. Shear-cuts hard wire. **Cut and hold capacity: Maximum .021 x .025 in. Nitinol, Braided and minimum .012 in. Nitinol.**

900-756

900-757 Long Handle

End Cutter

(Distal)

72° angle for very close cut to buccal tube. **Cutting capacity: Maximum .021 x .025 in. Hi-T™ and Nitinol; minimum .016 x .016 in. Braided and .016 in. diameter Nitinol.**

900-750

Hard Wire Cutter

15° cutting angle. New specially designed, diamond-honed to cut hard wire. Precision-machined joint. **Cutting capacity: Maximum hard wire up to .021 x .025 in.** Hi-T and Nitinol; minimum .010 in. diameter Hi-T.

900-751

Wire Cutter

Similar to 900-751 straight cutting jaws. **Cutting capacity: Maximum archwires up to .021 x .025 in. Hi-T and Nitinol; minimum .010 in. diameter Hi-T.**

900-752

Pin and Ligature Cutter

Straight-back designed to cut soft wires. Sharp pointed diamond-honed tips to cut ligature wire at very point of cutter blades. **Cutting capacity: Maximum soft wire up to .014 in. diameter.**

900-753

Miniature Pin and Ligature Cutter

Tips for finite cutting of ligature wires. **Cutting capacity: Maximum soft wire up to .012 in. diameter.**

900-754

Micro-Miniature Pin and Ligature Cutter

Sharp pointed diamond-honed tips to cut ligature wire at very point of cutter blades. **Cutting capacity: Maximum soft ligature up to .010 in. diameter.**

900-755

Warning: Before cutting wire in the mouth with any non-safety hold cutter, place a gauze pad or cotton roll next to the wire end to catch wire fragments.

Do not over-stress instruments as instrument may break if over-stressed. Observe maximum capacity listed for the instrument.

Orthodontic Hand Instruments

Fixed Appliance Removing Instruments

Universal Separating Pliers

Lightweight stainless steel pliers provide easy access to difficult-to-reach areas. Features spring-back action.

800-734

Convertible Cap Removing Pliers

Precision pliers use reciprocal action to shear off the temporary cap of a convertible first molar tube.

805-035

Replacement Tips 5/pk
805-036

Debonding Instrument

Debonding tool designed for the removal of traditional Non Self-Ligating Metal and Ceramic Bracket Systems. The positioning ledge is not used in debonding metal brackets; refer to the Debonding Instrument Technique Guide for additional information.

900-850

Positioning Instruments

Bracket Positioning Gauges

Precision machined handles, color coded size, establishes proper bracket height, measured from bracket slot to incisal/occlusal surface of tooth.

900-836 Positioning Gauge One (2.0–2.5 mm)

900-837 Positioning Gauge Two (3.0–3.5 mm)

900-838 Positioning Gauge Three (4.0–4.5 mm)

900-839 Positioning Gauge Four (5.0–5.5 mm)

900-840 Positioning Gauge Five (6.0–6.5 mm)

900-841 Set of four Gauges (One–Four)

MBT™ Versatile+
Appliance System

7.6 Hand Instruments

Self-Ligating Bracket Hand Instruments

Debonding Instrument

This Debonding Instrument is for the Clarity™ Ultra Self-Ligating Bracket system.

804-175

SmartClip™ Appliance Wire Disengagement Instrument

Archwires are removed from Clarity™ SL Self-Ligating Brackets or SmartClip™ Self-Ligating Brackets by sliding the instrument's hooks beneath the archwire and lifting it away from the bracket with a squeeze.

804-160

804-161 Slide Reorder Pack

804-162 Hook Insert Replacement

Self-Ligating Bracket Debonding Instrument

Distinguished debonding tool designed for the Self-Ligating Bracket System: SmartClip Self-Ligating Brackets. Also recommended for Clarity™ Advanced Ceramic Brackets. May be used with or without the archwire engaged in the bracket slot.

804-170

Open-Close Instrument

Open-Close instrument for Clarity™ Ultra Self-Ligating Brackets.

804-155

Bracket Placement Instrument

Stainless Steel Reverse Action Tweezer/ Instrument designed with Self-Ligating brackets in mind. The downward slope of the forearm improves operator visibility while placing the bracket onto the tooth. The instrument is constructed with a convex reverse end that can be used to seat brackets, the slender tips and concave undercarriage allow easy bracket removal from the APC™ Adhesive blister.

804-171

Lingual Instruments

Lingual Weingart Utility Pliers with 60° Bend

Have tips angled at 60° for easy access to the lingual arch. The fine tapered tips help make working in the limited space easier, and the tip serrations provide a secure grip on the wire. The tips are rounded for patient comfort and safety.

803-530

Lingual Cinch Back Pliers

Used to make a 90° wire bend distal to the buccal tube. Long handles assure convenient access to the area with patient comfort, while serrated tips hold the wire firmly.

**For use with nitinol wires
.012 - .018" (.30 - .46 mm).
803-531**

Lingual Anterior Debonding Pliers

With an enhanced gripping surface for security and a functional ergonomic design, the debonding pliers make the bracket debonding step easier. These pliers accommodate the custom bases of the Incognito™ Appliance System Brackets.

803-532

Lingual Detailing Pliers

Enables .75 mm 1st and 2nd order bends intraorally without having to remove the archwire. The double-sided head is designed to work interproximally, even where space is limited.

**Maximum wire size:
.018 x .018" (.46 x .46 mm)
803-535**

Lingual Light Wire Flush Cut Distal End Cutter

Gives a flush cut to the wire at the distal end of the terminal tube, reducing the possibility of patient discomfort from archwire protrusion. The safety hold feature secures the loose wire after the archwire is cut. Tips are made of Tungsten Carbide for durability.

**Minimum wire cutting capacity:
.012" (.30 mm).
Maximum wire cutting capacity:
.016 x .025" (.41 x .64 mm)
803-550**

Lingual Heavy Wire Flush Cut Distal End Cutter

Gives a flush cut to the wire at the distal end of the terminal tube. These pliers are designed for larger wires, and tips are made of Tungsten Carbide for durability. The safety hold feature secures the loose wire after the archwire is cut.

**Minimum wire cutting capacity:
.016" (.41 mm)
Maximum wire cutting capacity:
.021 x .025" (.55 x .64 mm)
803-551**

7.8 Hand Instruments

Lingual Instruments

Lingual Distal End Cutter

Used for a wide range of wire sizes. It features long handles and a narrow design, with cutting tips made of Tungsten Carbide for durability. A clean square end cut reduces deburring, and the safety hold feature secures the loose wire after the archwire is cut.

Minimum wire cutting capacity:
.012" (.30 mm)

Maximum wire cutting capacity:
.018 x .025" (.46 x .64 mm)

803-552

Lingual Straight Ligature Cutter

Light duty cutter specifically for soft wires and elastics. Small and narrow in design, the sharp pointed tips can reach into tight and difficult to reach areas. Tips are made of Tungsten Carbide for durability.

Maximum wire cutting capacity:
.012" (.30 mm)

803-553

Lingual Straight Mathieu Pliers

Have fine straight tips for archwire insertion and elastomeric ligature placement.

803-570

Lingual Curved Mathieu Pliers

Feature fine curved tips for archwire insertion and elastomeric ligature placement on lingual brackets.

803-571

Lingual Bracket Placement Tweezer

A reverse action instrument used for the placement of lingual brackets, bondable tubes and attachments. The curved design allows easier viewing of the placement area.

803-572

Lingual Straight Mosquito Forceps

Feature fine serrated tips with positive locking to ensure consistent performance for elastomeric ligature placement on lingual brackets.

803-573

Lingual Director

The double-ended instrument aids in seating the archwire and is used for tucking ligatures after placement.

803-580

Lingual Short Probe

Used for the removal of elastomeric ligatures, and excess adhesive around brackets. It can also aid during bracket positioning.

803-581

Hinged Instruments

Deluxe AlastiK™ Force Modules Needle Holder

Miniature needle holder with ultra-fine tips to facilitate application of AlastiK Modules. Not for use with metal ligatures.

500-081

Mathieu Needle Holder

A precision stainless steel ligating instrument with fine, serrated tips and a quick-release positive locking mechanism on the rear of the handles. A free-sliding leaf spring on the inner surface opens the beaks when the lock is released. Very useful for placing AlastiK Force Modules. Can also be used with metal ligatures.

500-083

Ligating Instruments

Double-Ended Ligature Director

Features a straight, notched tip at one end for use on anterior brackets, and an angled, notched tip at other end for easier access to posterior brackets.

803-007

Double-Ended Dual Purpose Instrument

Combines offset taper for removing AlastiK™ Ligatures on one end and an angled notch ligature director on the other end to facilitate AlastiK module placement in hard to reach places.

900-815

Single-Ended Ligature Director

Made from stainless steel with a small, thin, serrated tip for tucking in ligature pigtails.

803-003

7.10 Hand Instruments

Miscellaneous Hand Instruments

Molar Band Seater

Features a hardened, colbalt-based alloy tip embedded in a molded handle which serves as a bite stick. The serrated, triangular tip allows better interproximal access with a positive grip.

811-001

Lightweight Band Seater and Pusher

A well-balanced, hollow-handled, stainless steel instrument with angled, serrated tip to assure a positive grip on band edges and seating lugs.

900-832

Sickle-Style Cement Remover and Bracket Positioner

Double-ended instrument with curved, tapered tip with sharpened inside radii, other tip flat serrated to push bracket. Designed for placing bracket and removing direct bonding adhesives.

APC™ Flash-Free Adhesive Coated Appliance System

Simply a better way to bond.

Bonding is undergoing a revolution. And while the current system of adding adhesive to a bracket works fine, the APC™ Flash-Free Adhesive Coated Appliance System works even better—and faster. The system's next generation, resin-soaked nonwoven mat adheres to enamel for a better, reliable bond that also eliminates the process of flash removal.

At Solventum, we think it's time to leave flash behind. We used proven Solventum technologies to develop APC Flash-Free Adhesive—the most efficient bonding system in orthodontics. Our innovative design creates a unique adhesive bonding substrate on the base of each bracket.

APC Flash-Free adhesive coated brackets have shown an average bond failure rate of less than two percent in the first ninety days of bonding.*

APC Flash-Free Adhesive is available on five appliance choices for complete 7×7 bonding and is compatible with both metal and ceramic brackets.

Saves Time and Cost

- ✓ Faster and more efficient bonding than non-precoated brackets.
- ✓ Eliminates the flash removal step from bonding.
- ✓ Simple, easy clean-up at debonding.

Superior Bonding Efficiency

- ✓ Bond time is reduced up to 40% per bracket.
- ✓ No flash removal reduces accidental bracket movement after positioning, reducing the need to reposition.
- ✓ Protects tooth enamel under adhesive.

For more information contact your Solventum Representative today.

*Solventum data on file.

Proven technology. Superior performance.

Powered by Solventum science, APC Flash-Free Adhesive leverages several of the highly advanced Solventum Technology Platforms such as nanotechnology, adhesives and nonwoven materials. The result is a revolutionary way to bond orthodontic appliances that eliminates the many challenges of bonding with flash.

Bonding reliability without flash removal. Orthodontic appliances bonded using APC Flash-Free Adhesive have reliable bond strength that's comparable to Transbond™ XT Adhesive and APC™ II Adhesive while eliminating challenging and time-consuming flash removal.

The difference is the fibers. Minimal bracket drift occurs after initial placement because of the adhesive bond provided by nonwoven materials. A web of micron-sized polypropylene fibers provide the necessary thickness and loft needed for a reliable bond.

A smooth, even and hygienic seal. The pre-coated resin forms a smooth meniscus around the bracket base. This creates an even seal and protects the enamel under the surface of the bracket from acid erosion caused by microleakage.

APC Flash-Free Adhesive is available with:

Clarity™ Ultra
Self-Ligating Brackets

Clarity™ Advanced
Ceramic Brackets

SmartClip™ SL3
Self-Ligating Brackets

Victory Series™
Low Profile Brackets

Victory Series™ Superior
Fit Buccal Tubes

APC Flash-Free Adhesive

Traditional paste adhesives require flash cleanup which can leave uneven excess adhesive or undercuts around the edges of brackets, allowing a surface area for food particles to accumulate or plaque to form. Our APC Flash-Free Adhesive forms a smooth meniscus when the adhesive coated bracket is seated, which seals the tooth surface around the edges of the bracket.

Transbond™ Plus Self Etching Primer

Easy-to-use Transbond Plus Self Etching Primer lets you etch and prime enamel in one simple step. A single-patient use foil pack contains pre-measured etchant and light cure primer that are applied together using a disposable applicator included with each pack. Works in both moist and dry environments with outstanding bond strength when used with moisture tolerant adhesives. Each unit contains enough primer for a complete arch. Use with light cure adhesives.

Clarity™ Attachment Material

Meet a better material for esthetic,
high-quality attachments

Experience the difference

It works with any aligner brand to create
attachments with ease.

2 (2.0 g each) syringes + 20 tips
359-630

Tips 20/pk
359-632

Flowable, but performs like a paste

The material dispenses
like a flowable while
staying in place like a
paste—no slump
or runniness.

Virtually bubble-free

The proprietary syringe
design dispenses material
with virtually no bubbles,
reducing the risk of
attachment fractures,
chipping or food entrapment.

Stain resistant

Designed to provide
superior stain resistance
from food and beverages,
maintaining an excellent
esthetic appearance.

Ergonomic and precise

The proprietary syringe
design supports greater
accuracy, control and
precision for optimal handling
while eliminating waste.

Durable

Nano-filled material ensures
long-term durability to
maintain the attachments'
shape integrity.

Solventum pioneered the use of nickel-titanium into orthodontists' wire progression plans. Today we offer three variations of Nitinol, three variations of stainless steel and Beta III Titanium – the happy medium between nickel-titanium and stainless steel.

Strict controls over archwire dimensions, visual appearance and mechanical properties assure the highest quality in the arch form, the force levels generated, and the malleability of the wire alloy.

Archwire Introduction

Many orthodontists state that archwire selection is more important when working with a self-ligating appliance than with a traditional appliance. Of significant importance are the force profiles, dimensional integrity and arch form availability of the archwires.

Force Profiles

When working in a low friction environment it is important to select archwires that deliver minimal, consistent and predictable force levels. For this reason, Solventum has designed archwires in a variety of materials and sizes to offer a large range of force profiles.

Dimensional Integrity

In a self-ligating system where ligatures are not actively seating the archwire, dimensional consistency is essential for the archwire to predictably express torquing, rotating and tipping movements. All Solventum square and rectangle archwires are engineered to have precise corner radii that deliver predictable torque control. Solventum archwires are available in a range of dimensions and include Hybrid and Dimpled options.

Arch Forms

A critical part of successful treatment is having an archwire that predictably develops the arch form best suited for each patient. Solventum provides three OrthoForm™ Arch Forms – Tapered, Square, and Ovoid – that offer the diversity needed to fit the range of arch forms among orthodontic cases.

Solventum also offers a large variety of wire auxiliaries to allow you to best treat your patients.

Simplified Archwire Sequence For Self-Ligating Appliances

Note: There are many variations to this basic sequence that can be used. Archwire sequence should always be modified to best treat each individual case. Hybrid rectangular arches can be substituted depending on torque requirements.

Treatment Phase	.018 Slot	.022 Slot
Initial Phase Getting Organized - leveling - aligning Necessary Wire Criteria - low forces - low modulus - low friction	Nitinol Classic .012 Nitinol SE or HA .014	Nitinol Classic .012 Nitinol SE or HA .014 Nitinol HA .016
Intermediate Phase Working the Big Picture - arch form correction - occlusal plane leveling - rotating - tipping Necessary Wire Criteria - medium forces - medium working range - medium modulus - medium malleability - low friction	Nitinol SE or HA .014 with Nitinol SE .014 tandem Nitinol SE or HA .018 Nitinol HA .016 x .025	Nitinol SE or HA .014 with Nitinol SE .014 or .016 tandem Nitinol SE or HA .020 Nitinol HA .016 x .025
Finishing Phase Getting Down to Details - vertical detailing - space closure - refine interdigitation - retention Necessary Wire Criteria - medium forces - short working range - high modulus - high malleability	Beta III Titanium (non-extraction) .016 x .025 .017 x .025 Permachrome Resilient (extraction) .016 x .025 .017 x .025 Braided .017 x .025	Beta III Titanium (non-extraction) .019 x .025 Permachrome Resilient (extraction) .019 x .025 Braided .019 x .025

9.4 Auxiliary Products and Accessories

Arch Form

Changes to arch form during treatment may result in instability and subsequent relapse, which can contradict this search for the ideal arch form. There is an awareness that a great deal of variation exists from one human arch form to another. With this in mind, Solventum provides three distinct arch forms that reconcile the variation in anterior curvature, inter-cuspid width, inter-molar width and the curvature from the cuspid to the second molars.

Malleability

How easily a wire bends and how well it maintains the bends placed by the orthodontist are important criteria for choosing the correct archwire material. Malleability (or bendability) is almost the opposite of elasticity. Springy metals are difficult to bend, but wires that bend easily have minimal elasticity. Below is a continuum of malleability* on a scale from one to ten, ten being the most bendable:

*Solventum data

Archwire

Tandem Archwires: Filling the Slot

Tandem archwires have shown to produce significant results in correcting rotations and creating leveling and alignment in SmartClip™ SL3.

In order to correct rotations and level and align the teeth early in treatment, the goal is to engage archwires that fill the horizontal plane and have a low unloading force. Using two flexible round archwires in tandem fills both the horizontal and vertical planes of the bracket slot. This configuration corrects and manages rotations while simultaneously correcting vertical discrepancies.

The tandem archwire should be inserted directly on top of the initial archwire used in treatment. There is no need to disengage the initial archwire, saving valuable chair time.

Tandem Archwire Combinations

Slot	Initial Archwire	Tandem Archwire
.018/.022	.012	.014
.018/.022	.014	.014
.022	.014	.016

The choice of tandem archwire combination depends on the slot size and degree of rotational deflection. In most cases, the .018 slot option will be the .014/.014 and the .022 slot will be the .014/.016 combination.

SmartClip™ Appliance Lower Anterior

9.6 Auxiliary Products and Accessories

Force Levels

Force levels of archwires can be divided into two distinct categories. The engagement force, which is known as the loading force, that the practitioner feels while handling the wire and ligating it into the appliance. The working force, commonly referred to as the return or unloading force, is the force that moves the teeth and is the force that the patient feels.

Engagement Force

Below is a continuum that describes the range of engagement forces from one wire alloy to another.* In this continuum, the smaller the number, the lighter the engagement force.

Working Force

Below is an example of comparison working forces between different types of archwires. In it you will see the working force generated from 3 mm of deflection to zero for different wire families. This working force chart details .017 x .025 gingival/occlusal direction:

Archwire Analysis

Clearly your choices are numerous, and your orthodontic training and experience contribute to the overall list of criteria you use. In addition to reviewing the criteria listed in the preceding pages, Solventum consultative representatives can provide an analysis and may be able to recommend a new wire progression for improved efficiency in your treatment plans.

Treatment Phase	First Choice	Second Choice	Third Choice
Initial Phase Getting Organized - leveling - tipping - rotating Necessary Wire Criteria - low forces - long working range - low modulus - low friction	Nitinol HA	Nitinol SE	Nitinol Classic
Intermediate Phase Working the Big Picture - space closure - arch form correction - occlusal plane leveling Necessary Wire Criteria - medium forces - medium working range - medium modulus - medium malleability - low friction	Nitinol Classic	Beta III Titanium	Permachrome Resilient
Finishing Phase Getting Down to Details - vertical detailing - individual rotations - refine interdigitation - retention Necessary Wire Criteria - medium forces - short working range - high modulus - high malleability	Beta III Titanium	Permachrome Resilient	Permachrome Standard

*Hybrid

Nitinol Heat-Activated is a thermally activated super-elastic archwire. It is the easiest of Nitinol wires to engage, and it delivers light continuous forces that effectively move teeth with minimal discomfort to the patient.

- Can be cooled or chilled resulting in a softer, more pliable wire for easy engagement
- Provides light continuous forces
- Force activation occurs around body temperature
- Available in square sizes making it excellent for early torque control
- Good bend retention when bent in hot water
- 10/pk unit of use

Nitinol Super-Elastic is easy to engage and maintains light continuous forces with a range between Nitinol Heat-Activated and Nitinol Classic.

- Provides light continuous forces
- Easy engagement characteristics
- Good early torque control
- 10/pk unit of use
- Available in Reverse Curve in folder pack of 10 wires

Solventum pioneered nickel-titanium as an improved alternative to stainless steel in 1977. This “Classic” archwire continues to provide the linear elasticity and bendability of high strength steel and the elastic working range and lighter forces that only a nickel-titanium can deliver.

- Long working range
- 40% the forces of stainless steel
- 10/pk unit of use

Known as the “happy medium” between nickel-titanium and stainless steel, this archwire provides the extended working range of a titanium alloy and the bendability of stainless steel.

- Processed to reduce breakage
- Polished surface finish for improved sliding mechanics
- Tight corner radii specifications reducing torque loss, especially in final phase of treatment
- 10/pk unit of use

Lateral Development Archwire

Lateral Development can help achieve a Platinum Proportion smile, which is the esthetic result that occurs when properly selected archwires completely express the lateral dimension of the upper arch, creating a gradation that exceeds the traditional Golden Proportion.

Dr. Robert Waugh designed Lateral Development Archwires for treatment of patients with smaller tooth anatomy and/or spacing. After measuring all anterior teeth in his practice for over five years, he has crystallized a method to consistently deliver a predictable anterior display while idealizing functional coupling of anterior teeth.

A unique feature of the Lateral Development System is that the archwires have circular anterior contours available in three coordinating sizes with approximate radii of 28 mm, 26 mm and 24 mm. Each wire is specifically designed to align and display the upper anterior six teeth for a known range of mesial-distal tooth sizes. Now, patients with small, medium, and large teeth can achieve both a predictable esthetic display and coordinated occlusion.

Simple Technique for Choosing the Right Arch Form

- After initial alignment, total the collective mesio-distal widths of the upper anterior six teeth (rounded to nearest 1/10th of a millimeter).

This case displays a consolidated width of 44.8 mm, indicating consideration of arch forms R26 upper and R24 lower.

- Using the reference diagram below, select the appropriate upper arch form radius for the patient's "Platinum Proportion" or gradation (R28, R26 or R24). Based on the upper arch form radius, select the appropriate lower archwire.

Tooth Size Range – Corresponding Arch Form Size

Consolidated width 3 2 1 | 1 2 3
indicates arch form size:

Less than 40 mm = Customize R24
40 mm - 45 mm = R26 Upper and R24 Lower
45 mm - 50 mm = R28 Upper and R26 Lower
More than 50 mm = Customize R28

The Arch Evaluator is a useful tool that can be used at various times during treatment.

- Helps estimate the necessary lateral development
- Allows you to identify upper cuspid "Sweet Spot" position on wires and confirm proper upper cuspid bracket positioning
- Helps evaluate progression of lateral development
- Use on diagnostic model as an early guide for archwire sizing
- Can be used with wax bite to assess lateral development
- Confirms arch form size prior to insertion
- Tabletop guide for restoring shape following adjustment bends
- Reference for customizing extra-large or extra-small arch forms in extreme cases

Unit of Use

Unit of Use

Unit of Use

Our most popular stainless steel archwire – delivering a balance of malleability and springback.

- Better formability than Hi-T™ II
- Mid-range tensile strength
- OrthoForm II, III, LA packed 50/pk unit of use or 10/pk folders

- Standard Archform Round packed 50/pk folders, Square and Rectangular 10/pk folders
- Hybrid packed 10/pk unit of use

.019 x .025	.48 x .64	300-482

Unit of Use

This stainless steel archwire is recommended when complex bends and loops are required.

- Better malleability than Permachrome Resilient and Hi-T™ II
- Lowest tensile strength
- Round wires packed 50/pk folders, Rectangular wires 10/pk folders

Coaxial Wire

- Five (5) tempered wires wrapped around a core wire
- Light force
- Highly flexible – easy to engage
- Excellent initial wire
- One form for both U/L arches
- Ends do not unravel when cut
- 10/pk

Size		OrthoForm™ II 14 in. Lengths
Inches	mm	
.0155	.40	300-760
.0175	.45	300-761
.0195	.48	300-762
.0215	.51	300-763

Twist Wire

- Three (3) strand twist
- More continuous light force over greater working range than solid round wire of same diameter
- 10/pk

Size		OrthoForm™ II	
Inches	mm	Upper	Lower
.0175	.45	300-701	300-702

Ligature Wire and Tie Hooks

Ligature Wire

- Preformed ligature slips easily over all brackets
- Coated preformed ligature wire; ideal for esthetic brackets such as Clarity™ Brand Brackets
- Dead soft permachrome wire in color coded bundles of 200
- Coated ligature wire reduces friction between archwire and bracket

Preformed Uncoated (1,000/pk)

Diameter		Color Band

.012	.30	200-124
.014	.36	200-144

Auxiliary Ligature Tie Hooks

- .014 in. (.36 mm) ligature wire spot-welded to form a hook
- Slips under tie-wing, secures like ligature
- Tie-in mesially or distally with archwire in place

390-145 100/pk

9.20 Auxiliary Products and Accessories

Retainer Wire

Hawley Labial Retainer (Single Loop)

- .030 in. (.76 mm) Permachrome Resilient Wire
- Preformed three dimensional complex bends, including lateral indents and convoluted palatal extensions for positive anchorage
- Ready to anchor in acrylic base
- Center of loop is on marginal ridge of cuspid

Hawley Retainer Wires (1/Pack)

Length (mm*)	Size		Length (mm*)	Size	
32.8	0	360-300	45.3	5	360-305
35.2	1	360-301	47.8	6	360-306

Forsus™ Class II Correctors

You can provide a proven, efficient, esthetic Class II correction treatment choice for your patients – one that works 24/7 with no patient compliance required. Forsus Class II Correctors are an effective alternative to headgear and elastics that can be added at any time, with or without molar bands. It's easy to see why more than one million patients have used Forsus appliances in treatment, with beautiful, predictable results.

*Spring removed at 5,000,000 cycles with no breakage.

Charts Source: 3M Laboratory

Forsus Class II Correctors are a study in efficiency that eliminates time-consuming laboratory setup. Attach the Forsus appliance to the upper molars and lower arch, creating a mesial force on the lower arch and a distal force on the upper arch. Long-lasting, consistent forces mean a more predictable outcome for your patients.

The Forsus Class II Corrector is fatigue resistant to perform reliably throughout the course of treatment. Best of all, as an intra-oral corrector, it is out of sight, making it your choice for esthetic Class II correction.

- Esthetic – no more headgear

Product Benefits:

- Out-of-the-box solution – no labs required
- Use with or without molar bands
- Efficient treatment that works 24/7

The L-pin module allows for more flexible installation options and movement in the mouth. It can be used with a gingival or occlusal headgear tube. The left and right sides are universal. It is also used with the Forsus Wire Mount, permitting installation without a molar tube.

AlastiK™ Easy-To-Tie Ligatures

AlastiK™ Force Products

- **Not Made With Natural Rubber Latex**
 - Exciting colors
- All colors are fade resistant for a minimum of one month in artificial saliva, 8% ethanol in water, cottonseed oil and carbonated citrated sodas.

AlastiK™ Easy-To-Tie Ligatures

AlastiK Easy-To-Tie Ligatures are designed with a 45° bend for easy and efficient tie-wing hook up. The unique angled shape reduces the range of movement needed for bracket ligation, improving/decreasing ligation time.

Choose from 20 fade-resistant colors. One size fits most twin brackets.
Quantity 100 sticks per pack (1,000 ligatures).

Packaging: All Intraoral sizes – 100 elastics per patient pack, 30 packs per box (Total 3,000 elastics)

*Force rating based upon stretching the elastic three times slack diameter

Archwire Hooks and Stops

Adjustable Sliding Yoke

Archwire Hooks and Stops

- Crimpable
- Light loads
- 2 mm length
- Wall: round .015 in. (.38 mm)
- Split crimpable can be placed without removing wire
- Use crimping plier or dull hard wire cutter
- Ideal with Nitinol wire
- Weldable
- Medium hard temper
- One or two welds to permanently anchor
- .006 in. (.15 mm) wall
- Choice of two lengths: Round 2 mm or 1 mm; Rectangular 2 mm
- Use with extraoral headgear

Adjustable Sliding Yoke

- Clip onto archwire
- Adjust length then crimp
- 310-200 10/pk

To Fit Round Wire

Nitinol Coil Springs

Nitinol Coil Springs

Nitinol Open Coil Springs

Length 7" (175 mm)
Packaged 3 per tube
Available in three forces

Order No.	Min. Inner Diam. (Arbor)	Desc.	Opening Force (g) 25 mm (1") Length Compressed to 19 mm (0.75")
345-100	0.030" (0.76 mm)	Light	100 g
345-200	0.030" (0.76 mm)	Medium	200 g
345-275	0.033" (0.84 mm)	Heavy	275 g

Nitinol Closed Coil Springs

Length 9 mm and 12 mm lengths,
B Dimension, inner diameter
(arbor) 0.030" (0.76 mm).
Packaged 10 per box. Each
available in three forces.

Description	9 mm	Force (g) @ 12 mm Ext.	12 mm	Force (g) @ 24 mm Ext.
Light	344-150	150 g	346-150	150 g
Medium	344-200	200 g	346-200	200 g
Heavy	344-250	250 g	346-250	250 g

Important: Do not expand 9 mm coil to more than 22 mm total length from eyelet to eyelet or do not twist more than 180° (half a turn) to avoid deformation or significant change in force. A 12 mm coil spring is recommended for cases which require the spring to be expanded to 22-36 mm from eyelet to eyelet.

Caution: Not designed for use between upper and lower arches.

Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste

Patients with braces are at a higher risk for caries because food gets trapped around brackets. As a proactive measure, you can help to strengthen and repair enamel, and even reverse white spot lesions – by prescribing clinically proven, prescription-strength Clinpro 5000 fluoride toothpaste. It contains functionalized tri-calcium phosphate (fTCP) ... available exclusively from Solventum.

Indications:

- For use as part of a professional program for the prevention and control of dental caries

Product Benefits:

- Helps prevent and repair early lesions by remineralizing throughout the lesion – not just on the surface
- Optimized pH aids remineralization
- Creates acid-resistant mineral in dentin tubules*
- One-step convenience improves patient compliance – patients simply switch to Clinpro 5000 toothpaste for their brushing regimen once daily
- Backed by over 5 years of clinical use
- Vanilla Mint, Spearmint and Bubble Gum flavors

12115BG	Clinpro 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste Bubble Gum Flavor – 4 oz tube

Vanish™ XT Extended Contact Varnish

Patients can find it difficult to clean thoroughly around orthodontic brackets, and over time it can lead to white spot lesions. Vanish XT varnish helps build a barrier against demineralization and acid erosion to protect their smile during the orthodontic treatment.

Indications:

- Site-specific, light-cured protective coating that can be applied around orthodontic brackets to prevent demineralization and acid erosion

Item No. Product Information

12148 **Vanish XT Extended Contact Varnish**
1 – 10g Clicker™ Dispenser

Product Benefits:

- Delivers fluoride, calcium and phosphate to help protect teeth from white spot lesions in those tough-to-clean areas around the brackets
- Remains on the teeth for 6 months or longer
- Vanish XT varnish can be recharged by brushing daily with Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste

Clinpro™ Clear Fluoride

A fluoride treatment that does more with less.

Based on patient and professional feedback, we've reimagined the traditional fluoride treatment. Clinpro™ Clear Fluoride Treatment has a new water-based formula that's ready to apply and enables effective fluoride uptake. With less time waiting to eat or drink after treatment, Clinpro Clear Fluoride Treatment makes it easy for your patients to say "yes."

Clear, water-based formula in a fast and easy L-Pop unit dose.

Formula is free of rosin and common allergens with a neutral pH

Stabilized calcium phosphate

Minimum contact time of just 15 minutes

Improved taste, smell, and mouthfeel

Suction-line friendly formula

Series 5 Facebows

Typical Facebow Assembly

Outer Bows

- Right outer loop is larger for ease of orientation
- Outer loops are bent outward (standard) or upward (on request)
- Outer bow facially is contoured for increased strength

9.44 Auxiliary Products and Accessories

Series 5 Facebows

Inner Bows

- Inner arch length is measured from distal side of loop to distal side of opposite loop on the inside of the inner bow
- Inner arch has narrow radius so adjustments are outward
- Preformed inner loops serve as adjustable stops as well as shock absorbers and are angulated for gingival clearance

Note: Unless otherwise specified, Series 5 facebows are shipped with adjustable loops bent occlusally. For loops bent gingivally, indicate “special” when ordering and specify “adjustable loops bent gingivally.”

Series 5 Facebow Sizing Guide
